Responsible and sustainable design of
living and working spaces.

CEILING PROFILES

TECHNICAL SHEET

CEILING PROFILES

The acoustic ceiling profiles are created from a textile material made of Varian®: a hybrid and biosourced material made of flax fibre.

Manufactured in France by the company CULTURE IN, the Varian® ceiling elements are eco-designed, with no VOC emissions, ensuring optimal air quality. Varian® meets the requirements of the BREEAM and LEED standards.

Varian® acoustic solutions are available without fire treatment for the smallest possible ecological footprint, or with fire treatment to meet fire standards.

Ideal for interior space planning, our profiles are designed for ceiling cladding. With their acoustic filter, they are effective in promoting absorption while bringing a touch of design and purity to spaces.
