living and working spaces.

JAPANESE WALL

TECHNICAL SHEET

JAPANESE WALL

The Japanese walls are created from a textile material made of Varian® : a hybrid and biosourced material made of flax fibre.

Manufactured in France by the company CULTURE IN, the Varian® wall elements are eco-designed, with no VOC emissions, ensuring optimal air quality. The Varian® meets the requirements of the BREEAM and LEED standards.

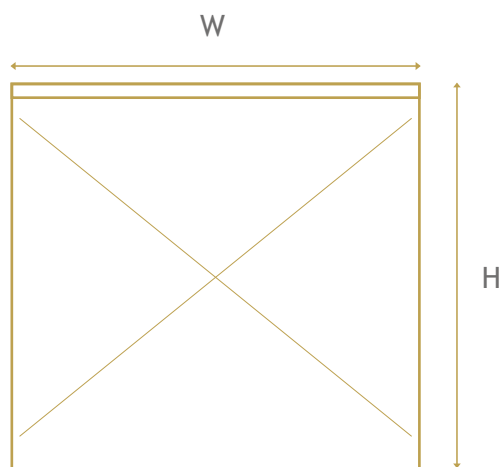

Varian® solutions are available without fire treatment for the smallest possible ecological footprint, or with fire treatment to meet fire safety standards.

Ideal for interior space planning, our Japanese walls have been designed to separate spaces, while allowing light to pass through. The Japanese walls play with the transparency of Varian® to improve the interior well-being and to provide a soft and pure atmosphere.

JAPANESE WALL

TECHNICAL CHARACTERISTICS

	Japanese wall	
Dimension	Size S	Size M
Width (mm)	450	900
Height (mm)	2500	2500
Reference	1PARJ001	1PARJ002

These dimensions are given as an indication, do not hesitate to consult our design office for other dimensions. Various shaping possibilities, please consult us.

ATTACHMENT SYSTEM

The fixing systems of our suspended screens can be adapted to your needs. Consult us to determine together the best solution for your project.
